

# Paver Stain & Sealer

Protect & Enrich Outdoor Masonry & Stones

**Give new life and glow to your pavers, stone, or porous concrete surfaces**

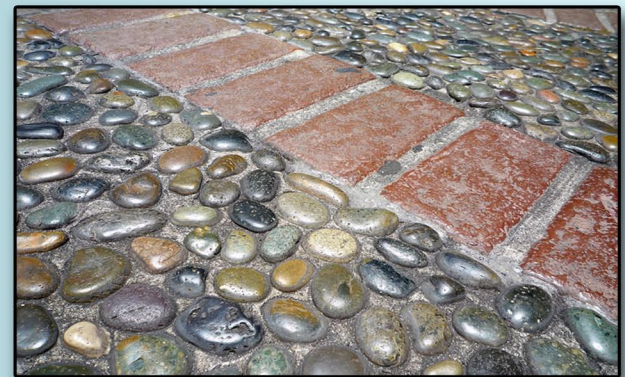

Protect, preserve, and enrich porous masonry, pavers and architectural natural stone with this environmentally safe, non-flammable, bio-oil based penetrating stain. Bring out the gleam and natural color of the pavers or stone and give it the “wet look” with the Clear paver stain formula.

Over time, colored pavers tend to fade and lose their original hue. The transparent colored stain will embellish your faded pavers and bring back a beautiful hint of color. Paver stain will provide water and mildew resistance making the surface much easier to keep clean.

This masonry stain is quite durable, especially on vertical surfaces such

as rock and brick walls or upright landscape stones. The more porous masonry products, such as pavers, will absorb more stain and will hold stain longer than smooth or polished concrete. The stain can easily be re-applied to refresh the color and gleam. Apply with a stain brush, paint pad, or roller to clean dry surface. This low VOC formula has very little odor and is completely non-flammable and eco friendly.

**Timber Pro UV Paver Stain & Sealer is available in:**

**\*Bare Paver    Clear    Glacier    Jade    Amber    Brick    Earth    Ebony**

\*Paver stain examples were applied to bare, light gray pavers. Please note that the original color of any stone or masonry will show through and affect the color of transparent stains. If used on very smooth polished concrete or non-porous surface the transparent stains will appear more opaque. Liquid samples are available to test color.
